Location: Level 13, 400 George Street, Brisbane

Start: Tue 25/01/2011 1:30 PM
End: Tue 25/01/2011 2:30 PM
Show Time As: Out of Office

Recurrence: (none)

Meeting Status: Accepted

Importance: High

Dear All,

This is a diary entry for the meeting as discussed with your office this morning.

The purpose of this meeting is to ensure that everyone is clear on how to deal with point 1 of the attached letter from Minister Robertson (dated 20/01/11).

Barry & Karen – this meeting was intended for Chairs only, however, Peter Borrows will be attending. You are welcome to attend also.

If you have any questions, or if I can assist at all, please do not hesitate to contact me.

Regards, Arnou.

Arnou Pruden

CC: Mr Gary Humphrys
Chair
SEQ Water Grid Manager
PO Box 16205
CITY EAST QLD 4002

Dear Mr Hennessy

You will be aware that the Premier recently announced a Commission of Inquiry into Queensland Floods which will consider among other things, compliance with, and the suitability of the operational procedures relating to flood mitigation and dam safety.

The Commission is required to deliver an interim report by 1 August 2011 (on matters associated with flood preparedness to enable early recommendations to be implemented before next summer's wet season); and its final report by 17 January 2012.

However, I am also aware that Seqwater is currently managing the releases from the flood compartment of Wivenhoe and Somerset Dams in South East Queensland, in the context of the company's current Flood Mitigation Manual for those dams. There are three matters I wish to raise with you in this letter:

(1) I note that under the Flood Mitigation Manual for Wivenhoe and Somerset Dams, Seqwater is required to prepare a report on the recent flood event (see clauses 2.9 and 7.4 of the Manual). It is essential that a report (covering the requirements of both clauses 2.9 and 7.4 of the Manual) to the Department of Environment and Resource Management (DERM) is completed within the required timeframe of six weeks from the date of the incident. However in view of the fact that we remain in the middle of the wet season and further significant inflows are possible, I would urge you to complete this review, which should include consideration of the appropriate Full Supply Levels, as a matter of priority and urgency.

Any other changes you propose to the Flood Mitigation Manual, or related matters, eg improved data collection, should be clearly identified in the Review report, along with a timetable to implement them.

Telephone +61 7 3225 1861
Facsimile +61 7 3225 1828
Email nrmet@ministerial.qld.gov.au

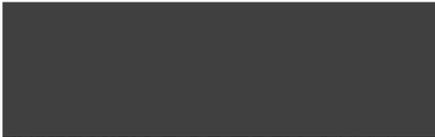

(2) Furthermore, while this review of factors relevant to the operating release strategy and the Full Supply Levels is underway, I would request that you develop a contingency protocol which would ensure that if rainfall, that is likely to result in a flood release from Wivenhoe Dam, is forecast for the catchment then Seqwater will immediately convene a discussion with the Chief Executive Officer of DERM, his dam safety regulatory staff, and other appropriate parties.

(3) I note that the recent preliminary report by Mr Cooper identified a number of improvements that Seqwater could implement to achieve a better outcome in the application of the Draft Communication Protocol between government agencies and local governments. I request that you contact Mr Bob Reilly, General Manager, Office of the Water Regulator of the department on 3224 2898, to progress these as a matter of urgency.

I have also written to the Chair of the Water Grid Manager and the Water Commissioner requesting all necessary assistance be afforded to SEQ Water to ensure the matters raised in this letter are responded to as a matter of priority and with urgency.

Should you have any further enquiries, please do not hesitate to contact Mr John Bradley, Chief Executive of the Department, on [REDACTED]

Yours sincerely

STEPHEN ROBERTSON MP

Subject: Draft Revised Interim program - for consideration and feedback prior to lodgement
Attachments: Revised Interim Program - DRAFT 16 Feb2011.DOC
 Lyle.

Seqwater notes that the Minister for Natural Resources, Mines and Energy and Minister for Trade announced on 13 February 2011 that, in order to temporarily increase the flood mitigation capacity of Wivenhoe Dam, the water storage level in the dam was to be reduced to and held at 75% of its Full Supply Level (*FSL*) until the end of the wet season on 31 March 2011.

The announcement followed advice from the SEQ Water Grid Manager on 9 February 2011 that the Grid Manager had no objection to Wivenhoe Dam being drawn down to 75% of its FSL from a water security perspective, and that the temporary draw down is unlikely to impact the Grid Manager's ability to comply with its obligations under the *South East Queensland System Operating Plan* or Grid Contracts.

In light of the Grid Manager's advice, the extreme nature of the January 2011 flood event and Seqwater's modelling, Seqwater recommended to DERM that Wivenhoe Dam's storage level be temporarily reduced to 75% of its FSL to temporarily increase its flood mitigation capacity.

We note the Director-General of DERM agreed to implement the above reduction in the water storage level in his letter dated 11 February 2011

Consequently, on 14 February 2011 the Moreton Resource Operations Plan was amended to include a new Section 13(6A) permitting a Resource Operations Licence holder with an approved interim program to submit a revised program to the chief executive for approval.

Seqwater is a Resource Operations Licence holder under the Moreton Resource Operations Plan with an approved interim program, and hereby submits a draft Revised Interim Program for your **consideration and feedback prior to lodgement for chief executive approval** under Section 13(7) of the Moreton Resource Operations Plan. Please note that Seqwater is still seeking approval from its insurers as to the terms of the attached draft revised program prior to lodgement of the program with the chief executive.

The draft Revised Interim Program, if approved, would authorise releases:

- to effect the initial reduction in the level of Wivenhoe Dam to an 'Interim Security Supply Level' being 75% of its FSL, from 14 February 2011 ; and
- thereafter, until 31 March 2011, to bring Wivenhoe Dam back to the Interim Security Supply Level where inflows occur after the initial reduction.

For your information, the above releases would not commence until after program lodgement and approval and after Seqwater has provided notifications to third parties (including Councils) and the other actions referred to in the 11 February 2011 letter from your Department's Director General to Seqwater have been finalised.

Regards, Peter.

**Seqwater Interim Program – Moreton Resource Operations Plan
(Revised 16 February 2011)**

The Moreton Resource Operations Plan (the ROP) commenced on 7 December 2009. The Queensland Bulk Water Supply Authority (trading as Seqwater) is the Resource Operations Licence Holder under the ROP for the following Water Supply Schemes:

- Central Brisbane River Water Supply Scheme;
- Pine Valleys Water Supply Scheme; and
- Stanley River Water Supply Scheme.

Where Seqwater, as the ROL holder, is unable to meet requirements of the ROP on its commencement, a structured process is available whereby a statement of programs currently in existence can be prepared and submitted to the Department of Environment and Resource Management (DERM), to be followed by an Interim Program. The box below sets out the relevant provisions under the ROP.

Relevant ROP Requirement

Interim Program

s13(1) The chief executive and the resource operations licence holder must implement requirements of this plan as soon as is practical within the timeframes stated below.

s13(2) Subsections 3 to 11 apply where a resource operations licence holder is unable to meet the requirements of this plan on the day this plan commences.

s13(3) The resource operations licence holder must –

- (a) within 2 months of commencement of this plan, submit a statement of programs currently in existence, to the chief executive for approval; and
- (b) **within 6 months of commencement of this plan, submit a program for meeting the requirements of this plan to the chief executive for approval, including a timetable and interim methods to be used.**

s13(4) The resource operations licence holder may, where an emergency or operational incident results in an inability to comply with any rules or requirements of this plan, submit an interim program for meeting the requirements of this plan to the chief executive for approval, including timetable and interim methods to be used.

s13(5) Where the submitted program relates to the Water Monitoring Data Collection Standards, the program must include the accuracy of methods currently used.

s13(6) The chief executive, in considering any submitted program, may request additional information.

s13(6A) Despite anything in subsections (2), (3) or (4), a resource operations licence holders with an approved interim program may submit to the chief executive a revised program for consideration under subsection (7).

[Seqwater needs to confirm that the final ROP amendment text is identical to what is submitted to DERM]

s13(7) The chief executive, in considering any submitted program, may either–

- (a) approve the program with or without conditions;
- (b) amend and approved the amended program; or
- (c) require the resource operations licence holder to submit a revised program.

s13(8) Within 10 business days of making a decision on a program submitted under this section the chief executive must notify the resource operations licence holder of the decision.

s13(9) Following approval of the program by the chief executive, the resource operations licence holder must–

- (a) implement and operate in accordance with the approved program; and
- (b) make public details of the approved program on their internet site.

s13(10) Where there is conflict between the provisions of this plan and the provisions of an approved program, the approved program prevails for the time that the approved program is in place.

s13(11) Where this section applies, the resource operations licence holder may continue to operate under the existing program until the program submitted under this section is approved.

Deleted: o

Seqwater submitted a Statement of Current Programs to DERM on 5 February 2010, in accordance with Section 13 of the ROP.

Seqwater submitted an Interim Program for the Moreton ROP to DERM in May 2010, as required under s13 of the ROP. After consultation with and at the request of DERM, an amended Interim Program was submitted to DERM on 27 August 2010. A delegate of the Chief Executive approved Seqwater's 27 August 2010 Interim Program on 3 December 2010.

On 14 February 2011, the ROP was amended to permit a Resource Operations Licence Holder to submit a revised program.

Under Section 6A of the ROP, this Revised Interim Program is now submitted to DERM for approval to facilitate the temporary reduction of Wivenhoe Dam to temporarily increase the flood mitigation capacity of the dam.

Draft

Seqwater Interim Program – Moreton Resource Operations Plan

Current as at 16 February 2011

Relevant ROP Requirement	Programs Currently in Existence (as submitted to DERW in February 2010 and confirmed in 2010 Approved Interim Program)	Interim Program, including Methodology	Timetable
<p>Departmental water monitoring data collection standards 11(1) Where this plan requires monitoring by a resource operations licence holder, including measurement, collection, analysis and storage of data, the resource operations licence holder must ensure the monitoring is consistent with the Water Monitoring Data Collection Standards.</p>	<p>Refer ss151-160.</p>	<p>There is currently limited monitoring of listed infrastructure under the ROP, however, a review will be undertaken (due for a staged completion, with final stage completed by 1 March 2012) to ensure monitoring is consistent with the Queensland Government Water Monitoring Data Collection Standards. The following sets out the timeline for the review:</p> <p>North Pine Dam: Review 1 July 2010; Implementation 1 September 2010 Sideling Creek Dam: Review 1 July 2010; Implementation 1 September 2010 Wivenhoe Dam: Review 1 October 2010; Implementation 1 January 2011 Somerset Dam: Review 1 October 2010; Implementation 1 January 2011 Enoggera Dam: Review 1 October 2011; Implementation 1 January 2012 Gold Creek Dam: Review 1 October 2011; Implementation 1 January 2012 Ciboollure River: Review 1 January 2012; Implementation 1 March 2012</p>	<p>1 September 2010 - 1 March 2012.</p>
<p>Departmental water monitoring data reporting standards 12(1) Where this plan requires transfer of data or reporting by a resource operations licence holder the resource operational licence holder must ensure the transfer or reporting is consistent with the Water Monitoring Data Collection Standards.</p>	<p>Refer ss161-167.</p>	<p>Seqwater applies the Queensland Government Water Monitoring Data Reporting Standards (Feb 2007) to its current reporting procedures.</p>	<p>Refer ss161-167.</p>
<p>Central Brisbane River and Stanley River Water Supply Schemes – Operating Levels for Infrastructure 72(3) The resource operations licence holder must not release water from any infrastructure unless the release is necessary to— (a) meet minimum flow rates in section 75; or (b) supply downstream demand.</p>	<p>Not compliant with ROP releases made for operational purposes and water quality and ecosystem health including fish management)</p>	<p>A. Seqwater will continue to make releases from infrastructure – 1. for consumption; 2. pursuant to the Manual of Operational Procedures for Flood Mitigation at Wivenhoe Dam and Somerset Dam; 3. for operational maintenance of dam infrastructure; 4. where B does not apply, to operationally maintain storage levels, in the absence of a flood event, at or close to FSL; and 5. for fish recovery.</p> <p>B. Seqwater will, between 14 February and 31 March 2011 ("2011 Summer Season") and subject to the operational constraints specified below, make the following releases from infrastructure – (a) the volume necessary to initially reduce Wivenhoe Dam to the Interim Supply Security Level; and (b) volumes necessary to reduce back to the Interim Supply Security Level, where inflows occur during the 2011 Summer Season that take the Wivenhoe Dam level to between the Interim Supply Security Level and the Full Supply Level.</p> <p>The releases specified in (a) and (b) will only be made where releases can be undertaken at a rate such that Burtons Bridge remains trafficable. If, after releases specified in (a) or (b) have commenced, the level in Wivenhoe Dam exceeds 67.25 m AHD and a flood event is declared, the dam will be operated in accordance with the Manual of Operational Procedures for Flood Mitigation at Wivenhoe Dam and Somerset Dam. Once the flood event has ended and the dam level is brought back to the Full Supply Level, the releases specified in (a) and (b) will be recommenced. For the purpose of the above, "Interim Supply Security Level" means 64.0 m AHD.</p>	<p>Ongoing</p>
<p>Central Brisbane River and Stanley River Water Supply Schemes – Streamflow Requirement 75 When critical water sharing arrangements are not in force, the resource operations licence holder must release a minimum flow of 8.64ML/day from Mount Crosby Weir.</p>	<p>No operational outlet works at Mt Crosby Weir, therefore no managed releases made.</p>	<p>As there are no operable outlet works at Mt Crosby Weir (and cannot be implemented without significant investment, including possible reconstruction of the weir), overflows are dependent upon releases from Wivenhoe and projected water supply demands and local inflows, the latter two components being outside Seqwater control. As a result, Seqwater has very limited control over releases from Mt Crosby Weir on a daily basis. As such, it is proposed that this requirement be deemed as satisfied if a minimum average flow of 8.64ML/day (for any given month) flows over Mt Crosby Weir, rather than a minimum flow of 8.64ML/day (for any given day).</p>	<p>Seqwater would be compliant with a requirement for a minimum average flow of 8.64ML/day for any given month from 1 July 2010. Compliance is not able to be achieved for a minimum flow of 8.64ML/day for any given day.</p>

<p>(e) within 5 business days of setting an announced allocation under subsection 1(c) or the first calendar day of every month when resetting the announced allocation under subsection 1(d) make public details of the announced allocation, including parameters for determining the announced allocation, on the resource operations licence holder's internet site for the Pine Valleys Water Supply Scheme;</p> <p>(f) not reduce the announced allocation during a water year;</p> <p>(g) round the announced allocation to the nearest whole percentage point; and</p> <p>(h) not set an announced allocation that is greater than 100 per cent.</p> <p>101(1) The announced allocation for "High Priority A" water allocations in the Pine Valleys Water Supply Scheme must be as follows—</p> <p>(a) 100 per cent when the level of water in storage in North Pine Dam is greater than E.L. 29.3m AHD; and</p> <p>(b) When the water level of water in storage in North Pine Dam is equal to or less than E.L. 29.3m AHD the announced allocation percentage for high priority water allocations must be calculated using the following formula —</p> $AAHPA = ((LV + DIVHPA) / HPA) * 100$ <p>101(2) The parameters used in the formula for announced allocations are defined in Attachment 6, Table 2.</p> <p>102 The total volume of water taken under a water allocation in a water year must not exceed the nominal volume of the water allocation multiplied by the announced allocation and divided by 100.</p> <p>Pine Valleys Water Supply Schemes – Critical Water Sharing Arrangements</p> <p>103(1) Critical water sharing arrangements are in force when the water level in North Pine Dam is equal to or less than E.L. 29.3m AHD.</p> <p>103(2) During times when critical water sharing arrangements are in force the resource operations licence holder must calculate the announced allocation for high priority water allocations in accordance with section 101(1)(b) of this plan.</p> <p>Pine Valleys Water Supply Schemes – Seasonal Water Assignment Rules</p> <p>110(1) The resource operations licence holder may approve a seasonal assignment of a volume of water provided that the total volume of water use in a water year for each zone will not exceed the maximum allowable water use volume in Attachment 6, Table 3 for each zone.</p> <p>110(2) The resource operations licence holder is responsible for dealing with applications for seasonal water assignment where the resource operations licence holder distributes water to the assignees.</p> <p>Resource operations licence holder monitoring and reporting – Monitoring data must be made available</p> <p>151 The resource operations licence holder must provide any monitoring data required under this chapter to the chief executive upon request and within the time requested.</p> <p>Monitoring requirements – Streamflow and Infrastructure water level</p> <p>152(1) The resource operations licence holder must record water level and volume and stream flow data in accordance with Attachment 9, Table 1.</p> <p>152(2) Infrastructure inflows may be determined based upon an infrastructure inflow derivation technique supplied by the resource operations licence holder and approved by the chief executive.</p>	<p>Not compliant with ROP (no programs currently in existence)</p> <p>Not compliant with ROP (no programs currently in existence)</p> <p>Not compliant with ROP</p> <p>Not compliant with ROP (ALERT data available for Baxters CK and Dayboro WWTP)</p>	<p>New Critical Water Sharing Arrangements processes and procedures will be in place by the commencement of the 2010/2011 Water Year (i.e. from 1 July 2010).</p> <p>New High Priority Announced Allocation processes and procedures will be in place by the commencement of the 2010/2011 Water Year (i.e. from 1 July 2010).</p> <p>Procedures for monitoring and approving Seasonal Water Assignments have been developed and will be in place by 1 July 2010.</p> <p>Requests for data outside of ROP reporting requirements will be provided within required timeframes. Please note, however, that a standard waiting period of 7-14 days applies to all ad-hoc requests and a longer waiting period may apply depending on the detail of the request.</p> <p>152(2) Consistent inflow derivation methodology will be developed by July 2011 for all storages. In the interim, existing methodology inherited from previous asset owners will be used where in existence. Please refer to Attachment 9, Table 1 at end of document.</p>	<p>1 July 2010.</p> <p>1 July 2010.</p> <p>1 July 2010 (please note waiting periods).</p> <p>1 July 2010 – July 2011.</p>

Relevant ROP Requirement	Programs Currently in Existence (as submitted to OERM in February 2010 and confirmed in 2010 Approved Interim Program)	Interim Program, including Methodology	Timetable
<p>Monitoring requirements – Releases from infrastructure 153(1) This section applies to the following infrastructure—</p> <ul style="list-style-type: none"> (a) Crossbrook Dam; (b) Mount Crosby Weir; (c) North Pine Dam; (d) Perseverance Dam; (e) Somerset Dam; and (f) Wivenhoe Dam. <p>153(2) The resource operations licence holder must measure and record for each release of water from infrastructure listed in subsection 1—</p> <ul style="list-style-type: none"> (a) the daily volume released; (b) the release rate and for each change in release rate— <ul style="list-style-type: none"> (i) the date and time of the change; and (ii) the new release rate; (c) the reason for each release; and (d) the device used for each release. <p>153(3) The resource operations licence holder for infrastructure mentioned in subsection 1(c) and 1(f) must record—</p> <ul style="list-style-type: none"> (a) the inlet level used for each release of water; and (b) the reason for taking water via a particular inlet level. 	<p>153(1)(b) No measured releases made</p> <p>153(2)(c) Operational Log ex SunWater system</p> <p>153(2)(e) Operational Log ex SunWater system</p> <p>153(1)(f) Operational Log ex SunWater system</p> <p>153(2) Data is recorded in Operational Log</p> <p>153(3) Data is recorded in Operational Log</p>	<p>153(1)(b): No operable outlet works exist at Mount Crosby Weir and cannot be implemented without significant investment. Releases are not made – only overflows, which are monitored and recorded. As such, it is proposed that the release rate and for each change in release rate – instead of releases since none are made. Sewerage report the overflows in compliance with ss153(2) and 153(3).</p>	<p>1 July 2010 (note: overflows and not releases will be reported for Mt Crosby Weir).</p>
<p>Monitoring requirements – Announced allocations 154 The resource operations licence holder must record details of announced allocation determinations, including—</p> <ul style="list-style-type: none"> (a) the announced allocations for medium and high priority water allocations; (b) the data announced allocations are determined; and (c) the value of each parameter applied for calculating the announced allocation. 	<p>Not compliant with ROP (no programs currently in existence)</p>	<p>New Medium Priority and High Priority Announced Allocation processes and procedures will be in place by the commencement of the 2010/2011 Water Year (i.e. from 1 July 2010).</p>	<p>1 July 2010.</p>
<p>Monitoring requirements – Water taken by water users 155 The resource operations licence holder must record the total volume of water taken, by each water user for each zone as follows—</p> <ul style="list-style-type: none"> (a) the total volume of water taken in each quarter; (b) the total volume of water entitled to be taken at any time; and (c) the basis for determining the total volume of water entitlement to be taken at any time. 	<p>Only HP water take measured – no meters for measuring MP water take</p>	<p>Full compliance with these requirements for the Central Brisbane River Water Supply Scheme is dependent on the development and implementation of a metering program within the Scheme (anticipated to be an ongoing program which will need to be implemented in close consultation with the Mid-Brisbane Irrigators, and will likely take until December 2012). All other schemes will be compliant from 1 July 2010. In the interim water estimations will consist of a quarterly mailout of recording sheets, specifying the requirement for recording volumes of water taken, plus supporting information, with submission of the recording sheets on a quarterly basis. The quarterly mailout will be a prompt for customers to submit their records.</p> <p>Advice will also be given of the sewerage position that where records are not received that it will be assumed that 25% of the customer's water entitlement has been used for that quarter, and that this will be recorded as such.</p>	<p>1 July 2010 for all schemes except Central Brisbane River Water Supply Scheme (anticipated to take until December 2012, with log sheets to be distributed in the first quarter after approval of the interim program).</p>
<p>Monitoring requirements – Seasonal water assignment of water allocations 156 The resource operations licence holder that approves a seasonal water assignment must record details of seasonal water assignment arrangements including—</p> <ul style="list-style-type: none"> (a) the name of the assignee, volume and location of water that has been seasonally assigned by an assignor; (b) the name of the assignor, volume and location of the water that has been seasonally assigned to an assignee; and (c) the effective date of seasonal water assignments. <p>Monitoring requirements – Critical water sharing arrangements 157 The resource operations licence holder must record details of critical water sharing arrangements including the following—</p> <ul style="list-style-type: none"> (a) the commencement date(s) and effective period of critical water sharing arrangements; and (b) the effectiveness of the critical water sharing arrangements. <p>Monitoring requirements – Water Quality 158 The resource operations licence holder must monitor and record water</p>	<p>Not compliant with ROP (no programs currently in existence)</p>	<p>Procedures for monitoring and approving Seasonal Water Assignments have been developed and will be in place for all schemes from 1 July 2010, however, it should be noted that Seasonal Water Assignments in the Central Brisbane River Water Supply Scheme are connected to implementation of a metering program (anticipated to take until December 2012 – please refer to ss88 and 164 for further detail).</p> <p>New Critical Water Sharing Arrangements processes and procedures will be in place by the commencement of the 2010/2011 Water Year (i.e. from 1 July 2010).</p>	<p>1 July 2010 for all schemes except Central Brisbane River Water Supply Scheme (anticipated to take until December 2012).</p>
<p>Monitoring requirements – Water Quality 158 The resource operations licence holder must monitor and record water</p>	<p>Somerset Dam Inflow:</p>	<p>Sewerage is currently compliant with the monitoring requirements for Wivenhoe Dam and Mt Crosby Weir (with the exception of tailwater monitoring since the downstream area is estuarine) and will be reported from 1 July</p>	<p>1 January 2011.</p>

Attachment 8, Table 1 – Water Allocation Schedule

Relevant ROP Requirement	Programs Currently in Existence	Interim Program, including Methodology	Timetable
Water Allocation Number 137: Brisbane Zone, Any Purpose, 25ML.	The map in Attachment 2(b) of the ROP does not include Somerset		

High Class A Priority. "This authorisation was authorised to continue under section 360ZDP of the Water Act 2000.	Dam, where part of this water allocation has always been taken. Due to the boundaries of the Brisbane Zone, this allocation is currently being taken outside of the specified zone in the ROP.	The zone where this entitlement has been issued does not include Somerset Dam, where part of this water allocation has always been taken. Due to the boundaries of the Brisbane Zone, this allocation is currently being taken outside of the specified zone in the ROP.
Water Allocation Number 139: Mid-Brisbane Zone, Any Purpose, 150ML, Medium Priority. "This authorisation was authorised to continue under section 360ZDP of the Water Act 2000.	In accordance with current take of water from the Mid-Brisbane zone.	

Attachment 9 – Resource operations licence holder monitoring: Locations where continuous time series height and flow data and storage water level data are required.

Location	Continuous time series storage water level data	Continuous time series flow data	Programs Currently in Existence	Interim Program, Including Methodology	Timetable
Mount Crosby Weir inflow		Y	Not continuous	A daily inflow derivation model is being developed which will incorporate outflow from Wivenhoe Dam, flow from Lockyer Creek and local area, change in Mt Crosby water levels and local irrigation and water supply demands.	1 July 2010.
Mount Crosby Weir headwater level	Y	Y	Continuous	Water level is monitored via ALERT to a 20mm resolution.	1 July 2010.
Mount Crosby Weir tailwater		Y	Not continuous	Downstream of Mt Crosby Weir is tidal and, as such, a downstream gauging station will not provide estimates of river flow. Releases are not made from Mt Crosby Weir and any flow through the fish way and over the weir crest will provide an estimate of the flow from the weir.	Estimate of flow from the weir in place by 30 December 2010.
North Pine Dam inflow		Y	Not continuous	A new daily inflow model is being developed and will be available by 1 July 2010.	1 July 2010.
North Pine Dam headwater level	Y	Y	Continuous	Compliant.	1 July 2010.
North Pine Dam tailwater		Y	Not continuous	Water level is monitored continuously at the Dayboro Rd WPS Weir about 1km downstream of North Pine Dam. At present, this is only available via SCADA and is not rated. Until the rating is developed and equipment installed at the site to enable remote monitoring, flow downstream of North Pine Dam can be estimated from the gate and valve openings at the Dam (anticipated for July 2011). A rating can be developed for the Dayboro Rd Weir based on recorded flows and heights.	July 2011.
Somerset Dam inflow		Y	Not continuous	A new daily inflow model is being developed and will be in place by 1 July 2010.	1 July 2010.
Somerset Dam headwater level	Y	Y	Continuous	Compliant.	1 July 2010.
Somerset Dam tailwater		Y	Not continuous	Somerset Dam tailwater is affected by levels in Wivenhoe Dam. When full, the water in Wivenhoe back up to the toe of Somerset Dam. As such, a tailwater gauge is considered inappropriate. Outflows from Somerset can be estimated from the recorded openings of the gates, sluices and valves at the dam.	Nil
Wivenhoe Dam inflow		Y	Not continuous	A new daily inflow model is being developed and will be available by 1 July 2010.	1 July 2010.
Wivenhoe Dam headwater level	Y	Y	Continuous	Compliant.	1 July 2010.
Wivenhoe Dam tailwater		Y	Not continuous	Please note: Water level is continuously monitored and recorded via ALERT and on-site logger with a resolution of 20mm which is owned by DERM not Seqwater (143035A). The site is rated but can be affected by backwater from Lockyer Creek. Discharge from the dam can also be estimated via the rated gates and valves.	Seqwater will not undertake monitoring for tailwater at this site since the gauge is owned by DERM (143035A).

Subject: RE: Draft Revised Interim program - for consideration and feedback prior to lodgement

Thanks Peter,

I note that in the document that you have submitted, the proposed changes have been incorporated into what appears to be the previously approved interim program. Just so I am clear, are the only changes those relating to section 72(3) of the Moreton ROP? While I have not noticed any other changes, I had been advised through our Legal Services team that Seqwater was also intending to submit a number of other "housekeeping" type amendments to the existing plan. If such additional changes have been proposed, it would be useful if these could be highlighted.

Your advice would be appreciated.

Lyle.

Seqwater notes that the Minister for Natural Resources, Mines and Energy and Minister for Trade announced on 13 February 2011 that, in order to temporarily increase the flood mitigation capacity of Wivenhoe Dam, the water storage level in the dam was to be reduced to and held at 75% of its Full Supply Level (*FSL*) until the end of the wet season on 31 March 2011.

The announcement followed advice from the SEQ Water Grid Manager on 9 February 2011 that the Grid Manager had no objection to Wivenhoe Dam being drawn down to 75% of its FSL from a water security perspective, and that the temporary draw down is unlikely to impact the Grid Manager's ability to comply with its obligations under the *South East Queensland System Operating Plan* or Grid Contracts.

In light of the Grid Manager's advice, the extreme nature of the January 2011 flood event and Seqwater's modelling, Seqwater recommended to DERM that Wivenhoe Dam's storage level be temporarily reduced to 75% of its FSL to temporarily increase its flood mitigation capacity.

We note the Director-General of DERM agreed to implement the above reduction in the water storage level in his letter dated 11 February 2011

Consequently, on 14 February 2011 the Moreton Resource Operations Plan was amended to include a new Section 13(6A) permitting a Resource Operations Licence holder with an approved interim program to submit a revised program to the chief executive for approval.

Seqwater is a Resource Operations Licence holder under the Moreton Resource Operations Plan

Pete,

We have advised the CEO of Stradbroke Ferries (Moggill Ferry) that our releases will fall significantly short of the 2.6m level they are concerned about.

Rob Drury has given the CEO his mobile number for any required updates during the release period.

Cheers Mike

Hello Lyall.

Changes are –

- Text in front 2 pages
- Revised Program Table - heading for column 2, date at top of table and the Interim Program and Timetable details for the Central Brisbane River Water Supply Scheme and Pine Valleys Water Supply Scheme

Regards, Peter.

Subject: RE: Technical Situation Report

All,

Seqwater has provided the attached Technical Situation Report for the planned releases, commencing Sunday morning.

The media release from last night is below.

Regards,
Dan

**GRID UPDATE
THURSDAY 17 FEBRUARY 2011
DAM RELEASES**

Wivenhoe Dam

The controlled gate release to temporarily reduce the level of Wivenhoe Dam to 75 per cent will commence Sunday morning, 20 February 2011.

The release is based on balancing the drinking water supply needs of the community while improving the flood mitigation capability of Wivenhoe for the remainder of the wet season.

It is expected that this controlled release will run for 9 days in order to take best advantage of the current mild weather, falling tides and the limited flows into the Brisbane River from other sources downstream.

Twin Bridges, Savages Crossing and Colleges Crossing will likely be closed to all traffic during this time. Local councils are still being consulted on these impacts however there are alternate routes in place for each of the closures. These include Mt Crosby Weir, which is open as an alternative to Colleges Crossing.

While minor tidal flooding along parts of the Brisbane River may occur over the next few days, the Wivenhoe releases will not impact on this.

Note, while a longer release pattern has been considered it has not been recommended by Seqwater, owing to the need to take best advantage of the current weather, tides and flows into the Brisbane River. Also, in order to keep Colleges Crossing open, the release pattern would need to be effectively doubled and would mean that both Twin Bridges and Savages Crossing would be impacted for at least 18 days and longer if there was rainfall in the Brisbane area or at the dam site.

Members of the public seeking information on potential impacts in their local areas should direct inquiries to their local councils in due course.

Dam updates are issued daily while release gates at Wivenhoe Dam are in operation.
